1. Improving Firefox Stability in the Enterprise by Reducing DLL Injection

URL: <https://hacks.mozilla.org/2025/03/improving-firefox-stability-in-the-enterprise-by-reducing-dll-injection/>

Fecha: March 25, 2025

Autor: *Haik Aftandilian*

Resumen:

Beginning in version 138, Firefox will offer an alternative to DLL injection for Data Loss Prevention (DLP) deployments in enterprise environments. DLL Injection DLL injection into Firefox is a topic we've covered on the Hacks blog before. In 2023, we blogged about the Firefox capability to let users block third-party DLLs from being loaded. We [...]

2. Launching Interop 2025

URL: <https://hacks.mozilla.org/2025/02/interop-2025/>

Fecha: February 13, 2025

Autor: *James Graham*

Resumen:

Interop 2025 continues the mission to make the web more consistent across browsers, building on 2024's 95% interoperability score. This year, 19 focus areas target key developer needs and long-standing issues, including WebRTC improvements, Storage Access API, and CSS Zoom.

3. Introducing Uniffi for React Native: Rust-Powered Turbo Modules

URL: <https://hacks.mozilla.org/2024/12/introducing-uniffi-for-react-native-rust-powered-turbo-modules/>

Fecha: December 4, 2024

Autor: *Mark Mayo*

Resumen:

Mozilla and Filament have introduced Uniffi for React Native, a tool that allows developers to leverage the safety and performance benefits of Rust in cross-platform React Native apps.

4. Llamafile v0.8.14: a new UI, performance gains, and more

URL: <https://hacks.mozilla.org/2024/10/llamafile-v0-8-14-a-new-ui-performance-gains-and-more/>

Fecha: October 16, 2024

Autor: Stephen Hood

Resumen:

Discover the latest release of Llamafile 0.8.14, an open-source AI tool by Mozilla Builders. With a new command-line chat interface, enhanced performance, and support for powerful models, Llamafile makes it easy to run large language models (LLMs) on your own hardware. Learn more about the updates and how to get involved with this cutting-edge project.

5. 0Din: A GenAI Bug Bounty Program – Securing Tomorrow's AI Together

URL: <https://hacks.mozilla.org/2024/08/0din-a-genai-bug-bounty-program-securing-tomorrows-ai-together/>

Fecha: August 8, 2024

Autor: Marco Figueroa

Resumen:

As AI continues to evolve, so do the threats against it. As these GenAI systems become more sophisticated and widely adopted, ensuring their security and ethical use becomes paramount. 0Din is a groundbreaking GenAI bug bounty program dedicated specifically to help secure GenAI systems and beyond. In this blog, you'll learn about 0Din, how it works, and how you can participate and make a difference in securing our AI future.

6. Announcing Official Puppeteer Support for Firefox

URL: <https://hacks.mozilla.org/2024/08/puppeteer-support-for-firefox/>

Fecha: August 7, 2024

Autor: James Graham

Resumen:

We're pleased to announce that, as of version 23, the Puppeteer browser automation library now has first-class support for Firefox. This means that it's now easy to write automation and perform end-to-end testing using Puppeteer, and run against both Chrome and Firefox.

7. Snapshots for IPC Fuzzing

URL: <https://hacks.mozilla.org/2024/06/snapshots-for-ipc-fuzzing/>

Fecha: June 27, 2024

Autor: Christian Holler

Resumen:

Process separation remains one of the most important parts of the Firefox security model and securing our IPC (Inter-Process Communication) interfaces is crucial to keep privileges in the different processes separated. We take a more detailed look at our newest tool for finding vulnerabilities in these interfaces – snapshot fuzzing.

8. Sponsoring sqlite-vec to enable more powerful Local AI applications

URL: <https://hacks.mozilla.org/2024/06/sponsoring-sqlite-vec-to-enable-more-powerful-local-ai-applications/>

Fecha: June 25, 2024

Autor: Stephen Hood

Resumen:

Today we're proud to announce the next Mozilla Builders project: sqlite-vec. Led by independent developer Alex Garcia, this project brings vector search functionality to the beloved SQLite embedded database. Alex has been working on this problem for a while, and we think his latest approach will have a great impact by providing application developers with a powerful new tool for building Local AI applications.

9. Experimenting with local alt text generation in Firefox Nightly

URL: <https://hacks.mozilla.org/2024/05/experimenting-with-local-alt-text-generation-in-firefox-nightly/>

Fecha: May 31, 2024

Autor: Tarek Ziadé

Resumen:

Firefox 130 will introduce an experimental new capability to automatically generate alt-text for images using a fully private on-device AI model. The feature will be available as part of Firefox's built-in PDF editor, and our end goal is to make it available in general browsing for users with screen readers.

10. Llamafile's progress, four months in

URL: <https://hacks.mozilla.org/2024/04/llamafiles-progress-four-months-in/>

Fecha: April 25, 2024

Autor: Stephen Hood

Resumen:

When Mozilla's Innovation group first launched the Llamafile project late last year, we were thrilled by the immediate positive response from open source AI developers. It's become one of Mozilla's top three most-favored repositories on GitHub, attracting a number of contributors, some excellent PRs, and a growing community on our Discord server.

11. Porting a cross-platform GUI application to Rust

URL: <https://hacks.mozilla.org/2024/04/porting-a-cross-platform-gui-application-to-rust/>

Fecha: April 23, 2024

Autor: Alex Franchuk

Resumen:

In this blog post, we delve into the motivations for choosing Rust for our crash reporter, outline the unique challenges of designing an application that operates when the main browser has failed, and discuss the new architecture we've implemented. We also share insights into the technical nuances of the implementation, demonstrating how Rust's features are leveraged to handle crashes more effectively and securely.
